

Proof of Soft Skills

This certificate represents a comprehensive analysis of interpersonal skills developed in a simulated work environment. By collecting perceptions from coequipers and Team Leaders, the manifestation and evolution of soft skills during team collaboration is highlighted. The feedback provided is contextualized in real situations, offering an authentic view of participants performance.

Interpersonal skills pt.2

This certificate offers a deep insight into soft skills under real circumstances and highlights the potential behavior of participants in a real work team.

Multidisciplinary teams

Teams are made up of individuals from diverse countries and cultures, promoting adaptability and intercultural understanding. The collaboration includes members from different generational groups, enriching the diversity of perspectives and approaches. Additionally, these teams are multidisciplinary, encompassing a variety of roles and technologies to address complex projects comprehensively. All of these teams work 100% remotely, reflecting modern work dynamics and enabling global collaboration without geographic barriers.

Challenges under pressure

Over five weeks, teams face real work challenges that demand technical skills and, crucially, interpersonal skills. These pressure challenges strengthen adaptability, effective communication and empathy in unfamiliar environments, preparing participants for the real world of work. Feedback in action Our system collects insights from coequipers and Team Leaders, highlighting how soft skills manifest during team collaboration. This feedback is provided in a real-world context, offering an authentic view of participants' performance and giving them the opportunity to continually develop their interpersonal skills.

100% remote teams

We highlight that all interactions and collaborations are carried out remotely, which reflects the reality of contemporary work environments and promotes effectiveness in virtual communication and coordination.
